

## Change Summary

- Project: codexa
- Worktree: isolated Codexa worktree
- Branch: codex/general/codexa-20260624-162241-focus-orientation
- Base: main
- Primary commit: ac16904
- Subject: fix(mcp): prefer focused workspace routing

## Changed Files

ac16904 fix(mcp): prefer focused workspace routing

- src/mcp-repo-root.ts
- tests/cli-hooks.test.ts
- tests/mcp.test.ts

3 files changed, 63 insertions(+), 79 deletions(-)

## Summary

- Removed the extra unscoped conflict guard so a selected session, explicit focus, or focused workspace default can route Codexa before unrelated active-session rows.
- Kept active-session ambiguity fail-closed when the workspace default is the configured root itself.
- Updated MCP and CLI readiness tests for default focus, active project focus, verified live rows, and root-default ambiguity behavior.

## Verification

- npm run build: passed
- npx vitest run tests/mcp.test.ts tests/cli-hooks.test.ts tests/init.test.ts: passed, 3 files and 115 tests
- npm run check: passed, including typecheck, source hygiene, privacy, Claude integration smokes, build, and 369 Vitest tests
- Codexa change-plan: saved snapshot codexa-workspace-default-routing-20260624
- Codexa post-edit-review: verdict continue, no drift, all recommended tests accounted for
- Codexa test-plan: recommended tests/mcp.test.ts, tests/init.test.ts, and tests/cli-hooks.test.ts
- Live readiness probes: session-start and MCP readiness doctor routed the workspace root to the focused Codexa checkout

## Review Notes

Adversarial review focused on routing precedence, stale active rows, workspace-root fallback, and privacy-sensitive PR artifacts. The additional hardening test locks the root-default safeguard so future default-focus changes cannot silently route back to the workspace root when multiple active project rows are present.
