

Change Summary

- Project: codexa
- Worktree: local Codexa feature worktree (host path omitted)
- Branch: codex/backend/codexa-20260712-codexa-lifecycle-governance
- Base: main
- Primary commit: 837f4dc
- Subject: feat(lifecycle): enforce worktree-bound governance

Changed Files

837f4dc feat(lifecycle): enforce worktree-bound governance

```

Verification

- git diff --check: passed
- npm run typecheck: passed
- npm run package:hygiene: passed
- Codexa skipped: Explicit Codexa revision-3 full-code posteditreview with all five invariant reviews returned continue/complete; final revision-4 docs-only review had no drift or unaccounted checks and was advisory only because documentation context quality was medium.
- git diff --cached --check: passed

- staged safety scan: passed

Notes

Implements the lifecycle-governance plan: exact checkout identity, invariant-bound replanning, bounded loop stops, external verification artifacts, and compaction-safe decision continuity. All behavior is project-neutral.
