

Change Summary

- Project: codexa
- Worktree: local session path omitted
- Branch: codex/backend/codexa-20260712-codexa-agent-ab-eval
- Base: main
- Primary commit: 95bef4c
- Subject: fix(eval): harden agent A/B evidence

Changed Files

95bef4c fix(eval): harden agent A/B evidence

```

Verification

- git diff --check: passed
- PYTHONDONTWRITEBYTECODE=1 npm run check: passed
- node scripts/agent-ab.mjs validate --config benchmarks/agent-ab/experiment.json: passed
- npm run package:hygiene: passed
- Codexa post-edit-review: completed; local artifact omitted
- Codexa test-plan: completed; local artifact omitted
- git diff --cached --check: passed
- staged safety scan: passed

Notes

Addresses both automated review findings, rejects transient task artifacts before hashing, aligns the reference and verifier on raw Unicode General Category Cc, and archives only the clean v7 run. V7 is non-confirmatory: both arms passed 2/2; Codexa showed no completion benefit and used 3.54x cost, 1.88x agent time, and 5.94x input tokens. V4-v6 are excluded diagnostics. No production runtime, package dependency, bin, lockfile, or packed evaluator surface changed.
